The next-generation Intel chip could hold records for data storage capacity and speed NEW YORK, May 30 (Reuters) - Intel Corp's next-generation semiconductor business has a big buzz, a massive pile of cash and what could be an entirely new operating model for the world's largest chip maker. Following the introduction of a low-cost, high-volume set of microprocessors last week, the buzz among analysts and investors is that the new chips could bring new leadership to the company's semiconductor division and further away from the personal computer market. "Intel's microprocessor business... is in the midst of its greatest transformation," said Dean Whorwood, principal analyst at iSuppli Corp. "This marks the beginning of the end of desktop/laptop computing and heralds the beginning of the 'machine in the cloud' era." While the market for chips for desktop and laptop computers is still large, a shift to the Internet and cloud computing will take time and Intel's new focus on internet connectivity could help it to reap big rewards. One analyst, who asked not to be named, said the company's plan to develop chips based on the "Broadwell" line -- or so-called "next-generation Intel" chips that combine leading-edge technology with low-cost manufacturing -- would be a boon for the company. Broadwell, which will focus on internet technology, is also a major development for the company's business unit, said the analyst. It marks the first time the company has moved away from the concept of making its chips for personal computers, he said. "We think this is a really good strategy for Intel," said the analyst, adding that Broadwell's next-generation technology is particularly important for companies such as Facebook Inc that have a lot of traffic on the Internet. Intel declined to comment on Broadwell's specifics, but noted it will launch its first new line of microprocessors in the second half of the year. "I'm really looking forward to the next wave of Intel technology because that will be something that really drives the machine in the cloud," the analyst said. Regardless of the success of Broadwell, the new chip could also have an impact on the business of another key Intel business, the memory business. "If Intel is really targeting the desktop

What is THIS The aim of the Gateway Awards is to recognise the most outstanding software of the year, across the entire mobile ecosystem, whether it's a mobile app, mobile game, mobile browser or a complete mobile ecosystem. If you're the author or developer of the most innovative, useful or entertaining software or service, that offers the best possible experience, when used on mobile devices, then consider yourself shortlisted. You'll be one of around 300 nominees listed below. When we announced that the Galaxy S8 was supported by
